Colorpak Expansion

Australasia's first **Mark Andy XP5000** servo driven flexo press has recently been installed at **Colorpak** in Sydney.

The XP5000 press is the latest development from **Mark Andy** which includes as standard, many new productivity enhancing features in addition to the servo drive function.

Aldus won this order as a total turn-key project that commenced with a project tele-conference with Colorpak staff, Mark Andy staff in St Louis and **Aldus** Engineering's Kevin Murphy, ensuring all parties agreed on all necessary details to guarantee a seamless delivery, installation and commissioning of the press. An intensive operator training program was initiated by Mark Andy and **Aldus** technicians once the press was installed.

Colorpak is very pleased with the installation and is already benefiting from the increased press speeds, quicker make ready, lower waste and improved print quality. Colorpak also states "Our pharmaceutical customers will identify the improved quality together with a smoother workflow pattern of product expectation from the Mark Andy XP5000 acquisition".

The press was supplied fully optioned with equipment from **GEW**, **Enercon** and **Trucolor**. ■

XP5000
